

XIAMEN UNIVERSITY MALAYSIA

廈門大學 馬來西亞分校

SCHOOL OF COMPUTING & DATA SCIENCE

Alumni

Learning experience of previous students

Student Name: Lee Rou

Programme: Software Engineering

The course that most attractive to me was Data structure, Architecture and Embedded System. The best learning experience during my studying time in Xiamen University Malaysia, most of the lecturers are attentive during classes and provided us with useful resources for learning. Students were helpful and respectful with each other. I overcome my difficulties in studies by having discussion with friends, seek lecturer's advice, self-study by watching video tutorials. One of the curriculum activities that I have joined in Xiamen University Malaysia is the Youth Leader Association. It's an association that aims to bring positive mindset and growth mindset. It involves people to join activities like hiking, camping, festivals, and exchanges cultural differences.

Student Name: Zhu Qijin

Programme: Computer Science and Technology

The most interesting course in Computer Science and Technology programme is Operating System. My best learning experience was in the class, I was most impressed by the professor of this course. Dr. Teh often uses some interesting questions and stories to attract our attention and transmit relevant knowledge to us. When I encounter problems or difficulties studying in XMUM, I firstly search online for the answers for my problems, if I couldn't obtain an ideal result, I will refer to my professors, normally, they answer my questions carefully and patiently. While my studies in Xiamen University Malaysia, I have attended a talk session "Integration into Smart Cities". During the talk session, I learned some academic related content that I can't learn in ordinary classes. For example, when I saw various experts express their views and understanding in this field at the smart city meeting, it helped me broaden my horizons views.
